

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

whose extirpation, so far as the Orkneys is concerned, was compassed in 1813 by Bullock.

In the *Transactions of the Edinburgh Field Naturalists and Microscopical Society*, Mr. Symington Grieve brings the history of the Great Auk down to the end of July, 1898, recording the further discovery of bones in kitchen middings on the coasts of Iceland and Denmark. Still more interesting, however, was the finding of a hollow cast of an egg of the Great Auk, determined as such by Prof. Steenstrup, in a deposit of the sub-glacial period in the southern part of Sweden, to the northeast of Falsterbo, by members of the Swedish Geological Survey.—F. A. L.

Stickney and Hoffmann's 'Bird World.'¹—This book is designed for use as a school reader for intermediate grades. It contains some seventy odd chapters most of which treat briefly of the commoner birds while others deal with various phases of bird-life or bird structure; thus there are chapters on 'The Coming of the Birds,' 'Bird Homes,' 'How Young Birds Get Fed,' 'Food of Birds,' 'About Birds' toes,' 'Birds' Bills,' etc. The material has been carefully selected and seems well adapted to interest children in bird-study.

The author has done wisely in securing the coöperation of a practical ornithologist and Mr. Hoffmann's name on the title page of her work is a guarantee of its freedom from serious errors. In two or three instances, however, more careful revision would have added to the accuracy of the author's statements. For example, on p. 22, feathers are said to grow on the toes of the Grouse; on p. 103 birds are stated to moult their feathers "one from one side, then one from the other," while the unqualified assertion that "Parrots hang themselves up at night by their beaks" requires considerable modification, and, as a matter of fact, the name 'Candelita' is not applied to the Redstart in the West Indian Islands, outside of Cuba.

The book is profusely and well illustrated by ten full-page drawings by Mr. Thompson, eight half-tone color photographs of mounted birds, pen and ink outlines of birds' wings, bills, feet, tails, etc., cuts from the publications of the Department of Agriculture, and other illustrations from 'The Osprey,' including several drawings by Mr. Fuertes.

An appendix gives a color key to fifty common birds, and lists of commoner birds grouped according to their local distribution, and whether beneficial or injurious, etc. — F. M. C.

NOTES AND NEWS.

A NEW ornithological magazine is announced by the Macmillan Company, to be called 'Bird-Lore.' It will be published bimonthly, under the editorship of Mr. Frank M. Chapman, the first number to appear in February, 1899. It will be "addressed to observers rather than to collectors of birds," and "will attempt to fill a place in the journalistic world similar to that held by the works of John Burroughs, Bradford Torrey, Olive Thorne Miller, and others in the domain of books." It will also be the official organ of the Audubon Societies, and a department devoted to their work and aims will be conducted by Mrs. Mabel Osgood Wright, the President of the Connecticut Audubon Society, and well known as a writer of popular books on natural history. It will also contain, in addition to the general articles, departments entitled 'Notes from Field and Study,' 'Hints for Teachers and Students,' etc. 'Bird-Lore' will be illustrated with reproductions of photographs of wild birds from life, show-
